Amorphous Poly Alpha Olefin HI8888

Technical Data Sheet

Updated: Mar 2022

Common chemical name	Amorphous copolymer of propylene
Generic name	Polyolefines
CAS number	25895-47-0
Synonym(s)	Amorphous poly alpha olefin copolymer
Color and Appearance property	Small pellet in white or pale yellow

Specification

1	Viscosity /cp (190°C)	120000±30000
2	Softening point / °C	162±2
3	Penetration / dmm (25°C, 100g, 5S)	10±3

Thermal characteristics

- 1.Noncrystalline, waxlike, slightly tacky solids. With increasing temperature, APAOs soften and become more tacky.
- 2.Stable at room temperature, and they are sufficiently stable for many open- air applications.
- 3.When exposed to oxygen at elevated temperatures for several hours, the viscosity is reduced and color darkens.

Application Sealant; Hot melt adhesive; Polymer modification; Thermoplastic compound.

Package Net weight 25kg in PP woven bag.
